Eytron Surveillance Set With 4 Cameras

Camera, signal transmission, monitor: the three central components of all video surveillance. Use the Eytron MJPEG to store and archive these pictures on the hard disk of this digital recorder.

At the video input, you connect the Eytron MJPEG digital recorder with up to 4 cameras, and at the video output with a monitor. A Quad for viewing all pictures on a monitor is an integral part of the set.

The analogue video signals of the camera are compressed to the space-saving MJPEG format in the recorder. The maximum resolution of the pictures is 640 x 272 pixels during recording. The resolution of live pictures is 720 x 576 pixels. The connected cameras are recorded in real time (25 frames/second). To save memory, the picture quality and frame rate can also be reduced. The hard disk of the Eytron MJPEG should be under 400 GB. In addition to the hard disk, you can save the data on a CF memory card or on your PC.

If necessary, you can connect wired sensors to the recorder at the cable clamp strip (with alarm input and alarm output). In this case, recording starts immediately when these sensors detect an alarm or event. Other ways of starting recording are manually or when motion is registered, or you can define time windows.

The scope of delivery includes 20 meters of cable and 4 Eyseo Mini bullet cameras (TV7181).

Product highlights:

- Complete set: Plug it together and start!
- Professional starter solution
- 20 metres of cable per camera
- 4-channel MJPEG recorder
- 4 x colour mini bullet camera
